Therefore, Claims 1-2, 4-25, 30-33 and 44-46 are pending in this office action.

#### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

#### **IN THE SPECIFICATION:**

Change the abstract to read:

#### **ABSTRACT OF THE DISCLOSURE**

A method and an apparatus for the investigation of a fuel cell system comprising at least one fuel cell having an anode side to which a fuel is supplied in operation and a cathode side which is separated from the anode side by a membrane and to which an oxidizing agent is supplied in operation, in order to carry out at least one of the following tests: a) to test whether the fuel cell system is gas-tight at the anode side and/or at the cathode side, b) to test whether a leakage is present between the anode side and the

cathode side of the fuel cell system, c) to test the starting behavior of the fuel cell system, d) to test the operation of the fuel cell system at low current yield. The respective test is carried out with a mixture of at least inert gas with at least one fuel permissible for the operation of the fuel cells, the mixture being supplied to the anode side of the fuel cell system. The mixture is so selected that the proportion of fuel lies below a value at which the mixture is flammable in air.

***Reasons for Allowance***

3. Claims 1-2, 4-25, 30-33 and 44-46 are allowed.
4. The following is an examiner's statement of reasons for allowance: the instant claims are to a method for the investigation of a fuel cell system, said fuel cell system having an anode side to which a fuel is supplied in operation and a cathode side to which an oxidizing agent is supplied in operation and comprising at least one fuel cell, each said fuel cell having an anode, a cathode and a membrane separating said cathode from said anode, said method comprising a first test comprising at least one of the following tests: a) to test whether said fuel cell system is gas-tight at said anode side and/or at said cathode side, b) to test whether a leakage is present between said anode side and said cathode side, c) to test a starting behavior of said fuel cell system, or d) to test an operation of said fuel cell system at low current yield, said first test being carried out with a mixture of at least one inert gas with a fuel permissible for the operation of said fuel cell system, said mixture being supplied to said anode side of said fuel cell system and the amount of fuel in the mixture being predetermined such that a

proportion of said fuel present in said mixture lies below a value at which said mixture is flammable in air, and wherein said tests are conducted outside of a test chamber, wherein the mixture consists essentially of 95% N<sub>2</sub> and 5%H<sub>2</sub>. Claims 4, 8, 22, 44 and 45 teach a similar method, including wherein the mixture consists essentially of 95% N<sub>2</sub> and 5%H<sub>2</sub>.

The most pertinent prior art has been presented. The prior art does not teach the claimed invention.

The closest prior art, Condit (US 6,635,370 B2), does not teach or fairly suggest a method for the investigation of a fuel cell system , said fuel cell system, said method comprising a first test comprising at least one of the following tests: a) to test whether said fuel cell system is gas-tight at said anode side and/or at said cathode side, b) to test whether a leakage is present between said anode side and said cathode side, c) to test a starting behavior of said fuel cell system, or d) to test an operation of said fuel cell system at low current yield, said first test being carried out with a mixture of at least one inert gas with a fuel permissible for the operation of said fuel cell system, said mixture being supplied to said anode side of said fuel cell system and the amount of fuel in the mixture being predetermined such that a proportion of said fuel present in said mixture lies below a value at which said mixture is flammable in air, and wherein said tests are conducted outside of a test chamber, *wherein the mixture consists essentially of 95% N<sub>2</sub> and 5%H<sub>2</sub>.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
